

## Third Heaven - Comments

(P)

Frankly, Dave, for our Earthly Paradise, I was hoping, not for a third heaven from which earth would become a paradise. I was hoping more for a new type of underground sprinkler system set on a timer from say 2 am to 4 am that automatically follows the time as the earth rotates.

This way we'll always have a clear view of the stars/planets in heaven. Then, as Jehovah populates the Universe, we could look up & say: "There's Mars, there's Saturn, and look! There is Gabrileum. I wonder what so-and-so is doing now-a-days up there. We haven't visited them in 2K yrs. We'll have to pop in & see them in the next hundred yrs or so."

I agree that once everything is hashed out here on earth that in time humans will also populate other prepared planets in the universe. Otherwise we will get to a point where no more children will be born without overpopulating the planet. Even in paradise conditions how could there be complete joy without everyone having children of their own?

As for the upper water layer, i don't think it will be in liquid form. The top layer of earth's atmosphere (other than the Exosphere which is basically outer space) is the Thermosphere. That wide region can reach temperatures of well over 3,000 degrees. If that is where the upper water layer will reside then at those temperatures the water would be in a gaseous state and would be clear. That way we get both our paradisaic conditions and a good view of the stars at night.

Oh, and your nighttime sprinkler system will probably also return in the form of a heavy mist, which is much better for the flora and fauna and does not erode the soil. (Ge 2:6)

:^)

Thermosphere. Now that I did not know (gaseous form of water, other than steam) AND I like it.

I am definitely confident in Paul's words: "Eye has not seen and ear has not heard, neither have there been conceived in the heart of man the things that God has prepared for those who love him."

To me, our earth/system is the first run. We barely have got off the line, out of the chute, onto the field.

It is as if we got suited up, then tripped & fell before we even got to the field.

ha ha :^)

I should have mentioned that i knew you were being funny with the sprinkler comment, but you were right in your idea of watering at night!

Yeah, if you look in front of the steam coming out of the teapot spout you can see the clear gaseous section before it turns into tiny water droplets (steam).

:^)

(P)

Teapot? Steam? I bet you're thinking: "what a dummy!" haha.

Well, that certainly was a blinding flash of the obvious....honestly I'm not a complete idiot....parts of me are missing.

Yep, that's me... head in the clouds, missing the practical at foot...

P.

---

AND its early!

You haven't had your morning cup-o-tea yet ha ha

:^)
